

REFERENCES

1.

As with anything technical, different authors tend to give slightly different advice, so one may need to look at numerous books to compare advice, and then make up one's own mind.

I think these first five titles cover most of what you need to know.

"The Artist's Handbook" by Ray Smith. This book has coloured illustrations and is quite comprehensive. I recommend getting the hardback version, as that version is easier to use as a text and reference book in the studio. This is a good book to start with.

The original "Artist's Handbook of Materials and Techniques" by Ralph Mayer is my main reference book for technical information. The last 4th edition being published in 1981. Ralph Mayer was actually a paint chemist, and his research was extensive. Unfortunately, the later revised edition of this book, published after his death, has some important information removed from the text. The later version of his book, however, is still worth consulting, and has some updated information.

The only outdated suggestion given in the book, relates to using varnish in painting mediums. It is now recommended, to never add any sort of varnish or resin, to a painting medium.

"The Painter's Handbook: Revised and Expanded", the 2011 edition by Mark Gottsegen.

The earlier 1987 hardback edition is very good, and has more information and better diagrams, etc.

"Glazing" by Michael Wilcox. A very very good recent book on oil painting techniques and materials.

"Art Hardware" by Steven Saitzyk (also at www.trueart.info)
